EMOSEAL

water based polymer modified bitumen rejuvenator

DESCRIPTION:

EMOSEAL SURFACE REJUVENATOR is a water based polymer modified bitumen emulsion based road binder with fine aggregate included and is ready for use. EMOSEAL is formulated to provide surface repair to weathered, oxidized road surfaces. Due to the nature of EMOSEAL, once the material has penetrated the surface, and the water has evaporated, the surface will be filled and sealed and have a revitalized appearance.

USES: Can be applied to all asphalt surfaces that are oxidized and require filling and sealing.

SURFACE PREPARATION: All surfaces to be repaired must be clean and dry and free from oils, dirt, and garden materials to ensure a proper bond to existing pavement. A sweeper is recommended in large areas, or the use of compressed air to blow the area clean is also recommended.

APPLICATION: EMOSEAL can be applied by brush, roller or spray. Application rate may vary upon age and type of pavement. Once applied to pavements,

SPECIFICATION AND TECHNICAL DATA

COLOUR: Black
VISCOSITY: 120 sec Ford No 4 Cup @ 20°C.
COVERAGE: Asphalt pavements - 0.25 to 0.45 litres / m²
DRYING TIME: 15 to 30 min. depending on ambient temperatures.

PACKAGING: 20L, 205L. 1000L

Steel containers are recyclable provided they are empty and any residual product is dry.
